Amazing Facts of the Deep

Discover relevant information about the animals, vegetation, life, and geography of the ocean through this compilation of essential data.

Marine Life Data Table

Category	Fact	Information	Related Link
Breathing	Gill breathing	Some animals, such as jellyfish, absorb oxygen from the water directly through their skin. A gastrovascular cavity within their bodies serves a dual purpose: digesting food and transporting oxygen and carbon dioxide.	Read article
Habitat	Freshwater	Freshwater ecosystems are bodies of water with low salinity. Wetlands, marshes, and swamps can be grouped into this category. They can also be divided into two subcategories: Lotic and Lentic.	Read article
Forms of locomotion	Tentacles	The tentacles have suckers only near the tip. In some squid species, the suckers are shaped like sharp hooks that allow them to better grasp their prey.	Watch IG post
Reproduction	Oviparous	Oviparous reproduction occurs when fertilization is external, with the female laying eggs and the male fertilizing them by releasing his sperm into the water. The embryo then develops inside the egg, but outside the mother.	Read article
Corporal temperature	Cold blood	Cold-blooded animals such as aquatic animals, depend on the environment to maintain their temperature. For example, snakes are often found basking on sunny rocks, and many insects must beat their wings before basking.	Read article
Protection	Shell	The shell of an animal primarily serves as protection for its vital organs, acting as armor that defends it from predators. Furthermore, it is an integral part of its skeletal structure, providing structural support and, in sea turtles, aiding in buoyancy.	Read article
Social behavior	School of fish	Schools of fish are fascinating examples of collective animal behavior. Thousands of individuals move in near-perfect synchronicity, even though each fish has a limited view of its surroundings.	Watch video
Types of feeding	Filter feeder animals	Filter-feeding animals are those that obtain the food they need from an aquatic environment by filtering the water. Interestingly, they are not only aquatic animals, but there are also filter-feeding birds and mammals.	Watch video
